Baelz offers heat exchangers for heat exchanging media, such as steam, condensate, hot and warm water.

As a manufacturer we are also able to offer special solutions. A wide range of conventional devices to a world-wide unique modular solution for steam is available for all types of devices in HVAC, distant heating and industry.

Steam generating units, containers and coolers round off the programme.

**baelz 105-S**

The heat exchanger with replaceable upright tube bank.

**baelz 106**

The robust apparatus suitable for all applications. Usually a welded tube bank, also available with replaceable tube bank; almost indestructible; suitable for almost all applications and outputs.

**baelz 107–110**

The apparatus which on account of its large water volume on the water side can be controlled very well also in the partial load region.

**baelz 111**

The universal apparatus has not been fitted with a replaceable tube bank, but has access permanently to the tube plates at the top and bottom; as baelz 112 variant, also suitable for industrial water treatment (parts touching the medium are coated, electroplated or made of VA completely).

**baelz 147**

Made of copper completely; on account of its very small dimensions suitable for replacement for small and medium output. Small dimensions, low price.

**baelz 150**

Like baelz 147, however made of VA completely, thus also suitable for industrial water treatment.

# Steam - water and water - water tube heat exchanger (upright variant)
